The Interface

Playing Music

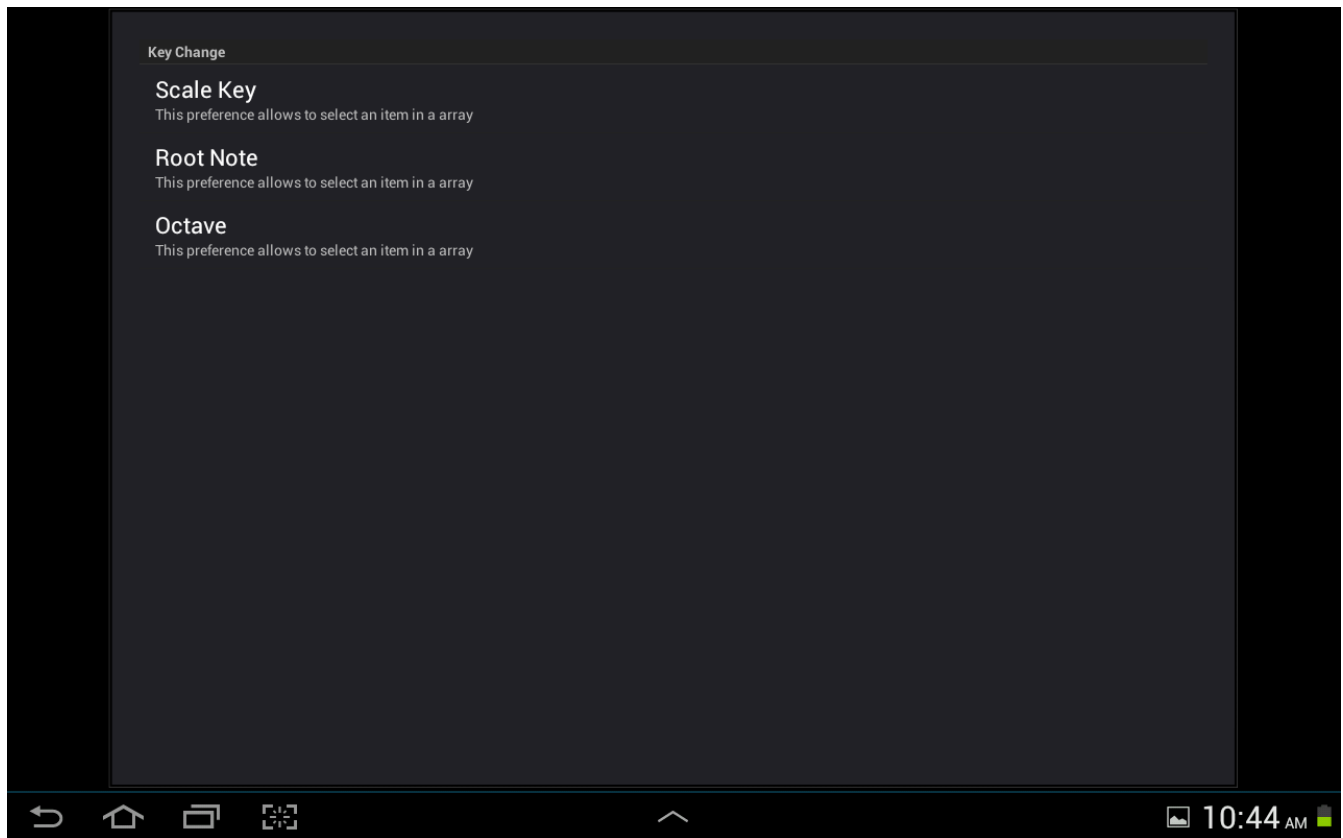

To play music, all you need are fingers and a sense of rhythm. You don't need to know anything about music to make something that sounds good in this app.

The keys are mapped to the pentatonic scale by default. To change this setting, enter the options menu that is available in the premium version.

Combo Band

The play button in the upper left corner will toggle background music. Additional backing tracks may be downloadable in the future for the premium version, along with the option to load your own backing track.

The Settings Menu

If you are using the free version, this menu will be greyed out and contain a link to the Play Store to purchase a copy of the paid version. Otherwise, the following options are available.

The settings menu contains all the information pertinent to the music you are currently playing. For example, if you are playing in an A major pentatonic, you can modify any part of the scale from here.

- **Scale Key**

To change the scale mapping on the keyboard, select it in here. The included ones thus far are major, harmonic minor, melodic minor, natural minor, pentatonic major, pentatonic minor, gypsy major, and gypsy minor. Additional scales may be added later inside of free updates.

- **Root Note**

Use this option to choose the first note in the scale.

- **Octave**

This will select the octave that the first note of your keyboard is placed in. So, if you want your notes to sound lower, decrease this number.

- **Keyboard layout**

This setting will toggle between a single full sized keyboard (simpler) or a dual “stacked” keyboard (offers a greater range of notes)

System Requirements

- Any 7 inch tablet running Android 2.2 or later.
- 46.78 MB of free space to install it.
